

One-way System

Update for FREEZING conditions!

Experiencing our first morning of frost on the new matting (ground frost makes it extremely slippery) it is immediately apparent that all adults need to make a common sense judgement about use of the matting based on the conditions of the day:

Frosty conditions => Please keep off the matting and **walk and queue on the partially frozen ground to the side of the matting** (*avoiding particularly worn or trampled areas where possible*).

FROST FREE conditions=> Please use the matting as part of the one-way system as described in our earlier email

To keep us moving forward in health as a community, please keep us informed of any problems you encounter and the solutions that you think might resolve them.

Thank you for all your continued support and patience in making the very best of the current opportunities and challenges.

Best wishes,

Andrew
